

HOSPITALITY

Mats for all environments; entrance, lobby, office, restaurants, kitchen etc.

MATTING

ALU entrance mats.

The first, important impression

The entrance gives the first, important impression of a business. It should look neat and fresh for many years. Matting has been supplying carpets for over 50 years. This experience has made us the natural choice for professional installations in public spaces. All our mats are of the same high quality, developed to withstand our harsh Nordic climate. The wear and tear on the mat depends of course on the environment and traffic load, so we offer several different options to meet all needs. Warranty is a matter of course. As important as the functionality of the products is that they are easy to care for and maintain. Our mats are easy to roll away for cleaning. They can withstand pressure washing and common cleaning agents.

Several of our products have been assessed by Byggvarubedömningen.

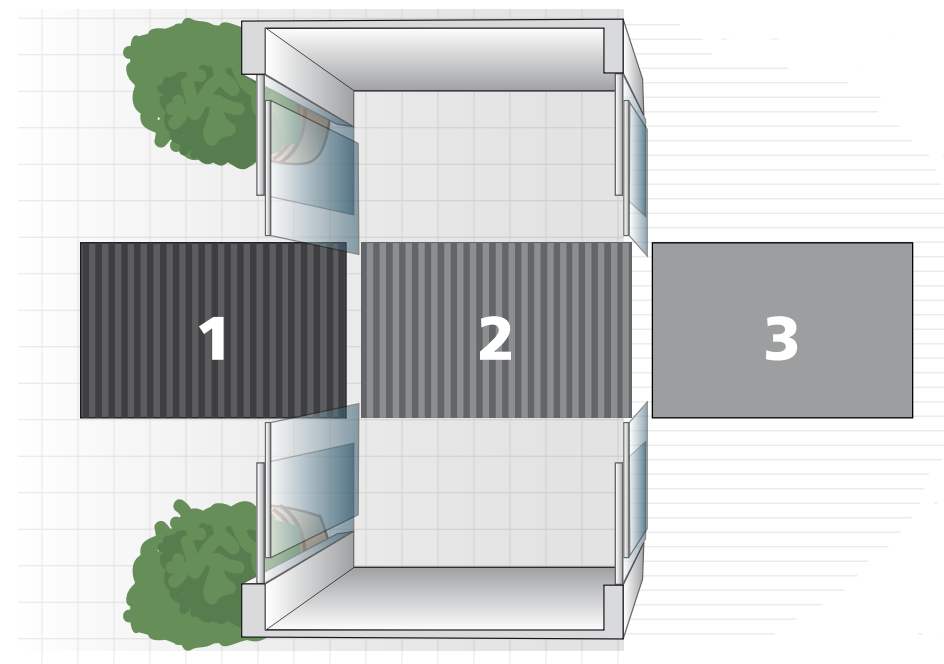

ALU entrance mats.

Three-Zone entrance mats

The most effective solution is a three-zone entrance system: first, a scraper mat that removes coarse dirt; next, a combination mat for finer particles; and finally, a drying mat to absorb the last traces of moisture. This proven system can capture up to 90% of the dirt and moisture brought in through the entrance.

However, it's not always possible to fit all three zones. In that case, we recommend a combination mat that both scrapes off coarse dirt and absorbs moisture, providing an efficient all-in-one alternative.

Zone 1 - scraper mat

The scraper mat should be at least 3-5 steps long (1.5-2 metres). It should collect the coarse dirt and keep it in the mat while being easy to clean. The fact that it is slip-resistant and drained are two more features that are important when choosing a scraper mat.

Zon 2 - scrape- / absorbent mat

The second step in the entrance solution is the combination mat. When there is no space to build a two- or three-step entrance, we recommend a combination mat, which can both scrape off residual dirt and absorb moisture.

Zone 3 - absorbent mat

The final step in an entrance solution is a highly absorbent drying mat that soaks up the last of the moisture and takes care of the fine dirt.

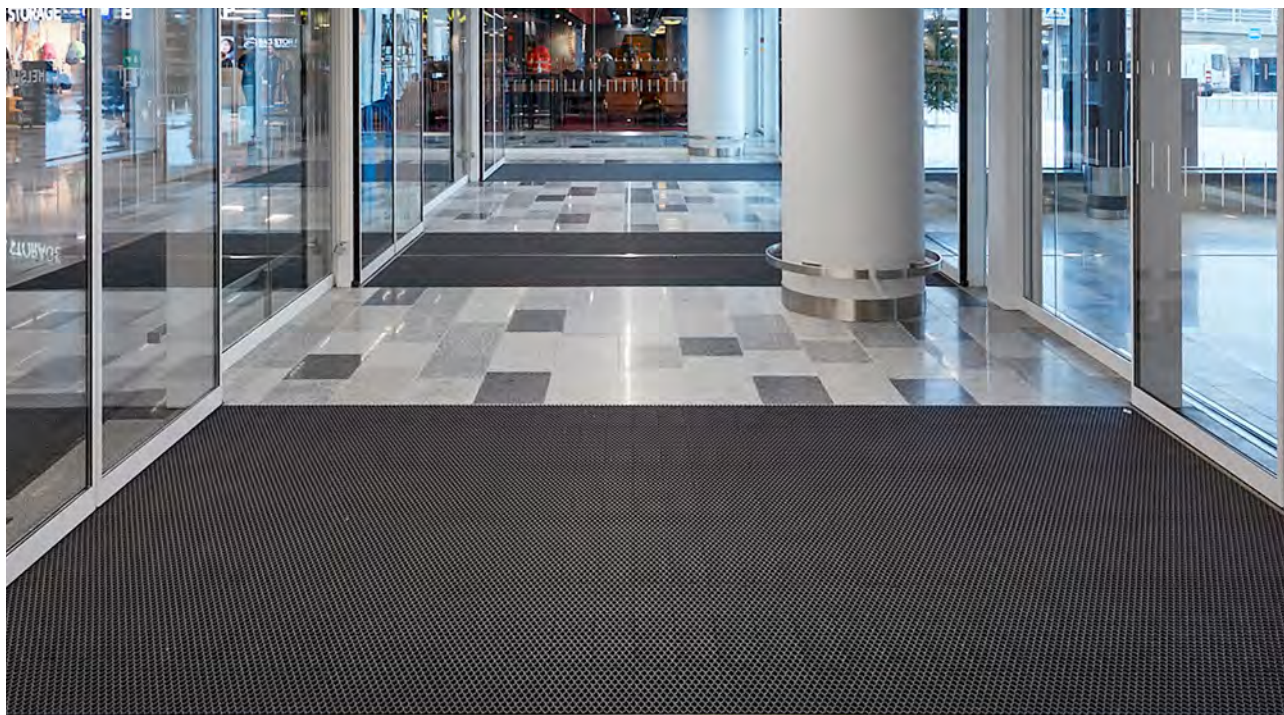

First impression lasts

First impressions matter – and your entrance is the first thing visitors see. A tidy, well-maintained entryway conveys professionalism and care. But an effective entrance solution is more than appearance – it's also about protecting your investment. By reducing the amount of dirt and moisture brought inside, you lower cleaning costs, minimize wear on floor surfaces, and extend the life of your interior.

Studies show that a well-planned entrance system can stop up to 90% of incoming dirt and moisture. That means less time and money spent on cleaning, fewer chemicals needed, and reduced strain on your cleaning staff. At the same time, flooring materials last longer since they're exposed to far less abrasion and moisture damage – a benefit that quickly pays off in saved maintenance and replacement costs.

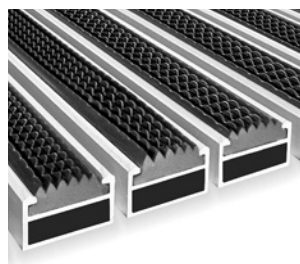

The principle is simple: with the right mats placed in the right order, dirt and moisture are captured at the entrance instead of spreading throughout the building. Whether you have space for a full three-zone system or just a single combination mat, the result is cleaner floors, lower upkeep, and a more sustainable building operation.

SCRAPER MATS

ALU RUBBER inlay – Stylish and robust mat in aluminium with inserts. Ideally installed recessed in a mat well for best function and appearance.

ALU with rubber inlay

JAGUAR / JAGUAR ECO

JAGUAR – A durable mat for tough, high-traffic entrances. Scrapes off dirt effectively, easy to clean, and economical in the long run.

JAGUAR ECO – A PVC-free version made from 50% recycled plastic. Same durability and performance as Jaguar, with clear environmental benefits.

YOGA LIGHT

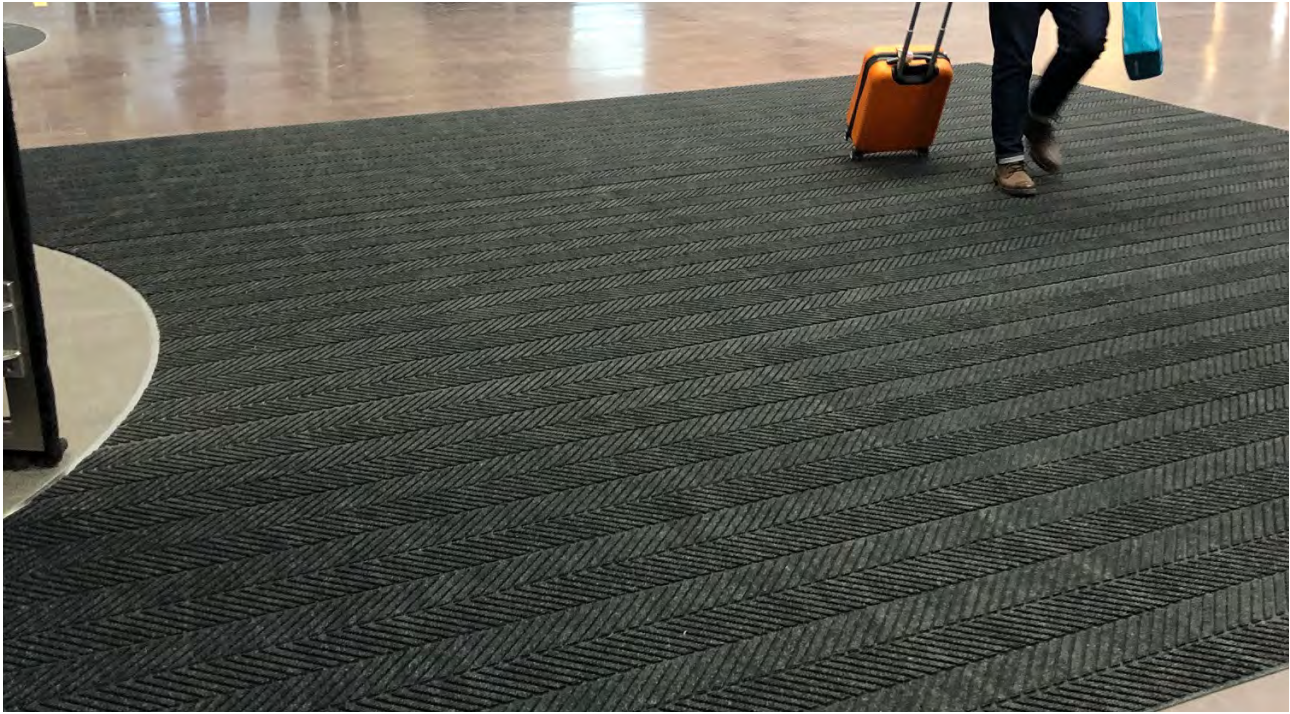

YOGA ZON / YOGA ZAP

YOGA LIGHT – Lightweight scraper mat for smaller entrances. Easy to handle and clean, flexible for different placements.

YOGA ZON / YOGA ZAP – Strong scraper mats designed to stop large amounts of dirt right at the entrance. Suitable for recessed or surface installation. Durable mats for heavily trafficked areas.

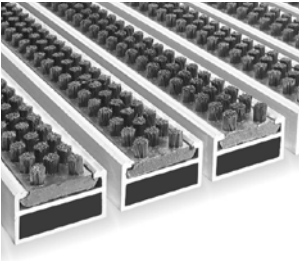

COMBINATION MATS

ALU SCRUB inlay – Robust aluminium mat with effective scraping properties. Ideally installed recessed in a mat well for best function and appearance. Combines durability with an elegant appearance.

COMBI ROLL ECO – PVC-free premium mat made from recycled PET yarn, reusing up to 68 PET bottles per squaremeter. Stylish, sound-absorbing and slip-resistant, with high absorbency and quick-drying properties. Minimal maintenance ensures long-term cost efficiency.

COMBI TILE ECO – Flexible tile version of Combi Roll. Easy to cut, assemble and place either recessed or on top of the floor. No glue required, making cleaning and replacement simple.

CORAL BRUSH – Highly effective at removing both moisture and fine dirt while retaining its fresh look. Made with recycled content (100% Econyl®), contributing to sustainability goals. Complies with the highest fire class standard: Bfl-s1.

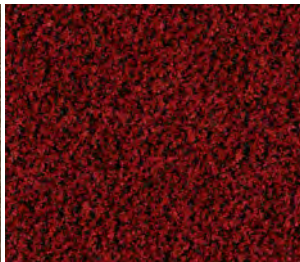

ALU with scrub inlay

COMBI TILE ECO

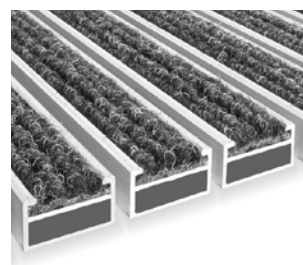

CORAL BRUSH

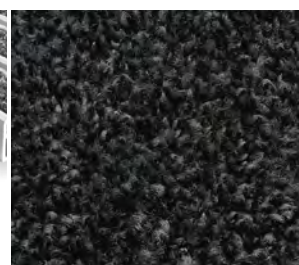

ABSORBENT MATS

ALU RIBBED inlay – Aluminium-profiled mat that trap dirt and moisture effectively. Very durable, possible to roll aside for cleaning, available in three heights for different traffic levels, slip-resistant and fire-rated. Ideal for indoor high-traffic entrances.

ALU with ribbed inlay

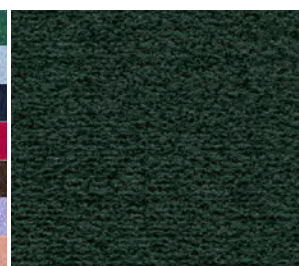

CLASSIC

CLASSIC – Washable entrance mat with nitrile rubber backing and reinforced edges. Durable, practical, and designed to handle heavy foot traffic while maintaining a clean look.

CLASSIC PRINT – Offers the same performance as Classic, with the option to add logos or designs. Made with strong PET fibers and available in 66 colors - perfect for combining branding with functionality.

CLASSIC PRINT

CORAL CLASSIC

CORAL CLASSIC – High-performing mat that absorbs moisture and scrapes off dirt. Solution-dyed fibers ensure lasting appearance. Available in rolls and tiles (50x50 cm) for large entrance areas and circulation zones. Complies with the highest fire class standard: Bfl-s1.

TACTILE GUIDANCE

Making buildings more accessible is a challenge. Both because few have the expertise and because the regulations are difficult to interpret. At Matting, we support you throughout the process – from evaluating the accessibility needs of your building to planning the guidance systems and installing them in accordance with legal requirements and ISO standards.

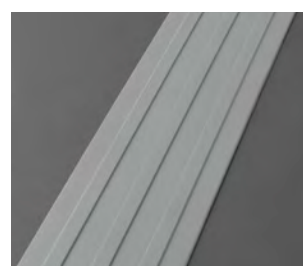

Visually impaired people and individuals with orientation difficulties need clear identification points and structured guidance to find their way around. We provide both visual and tactile (tangible) guidance systems for both indoor and outdoor environments. Our range is available in a variety of materials to suit different floor surfaces and environments.

Brass ECO & brass

Workplace mats

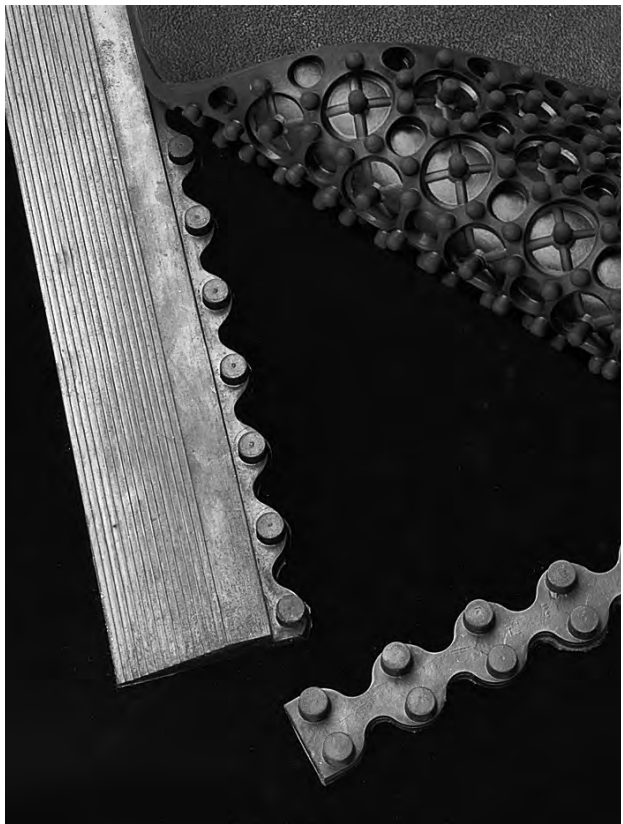

More and more companies have realised the importance of a good working environment, and ergonomics is a topic we hear more and more about. It is about how working postures, movements at work, physical strain and other conditions affect the body's muscles and joints. Physical strain is one of the most common causes of work-related ill health, often linked to heavy lifting, repetitive or monotonous tasks, and awkward working postures. Ergonomic workplace mats are a step in the right direction in terms of improvements for staff standing and working on hard surfaces.

KITCHEN AND BARS

Mats in environments where there are extra high demands on hygiene, such as food handling. These mats are made for environments where you handle food or have other high demands on hygiene and chemical resistance. The special, dense rubber compound makes it difficult for bacteria to take hold and the mats can be disinfected with antiseptic chemicals. The high nitrile rubber content makes them resistant to oils, grease and chemicals, while providing high durability and heat resistance. The heavy-duty pattern makes them highly slip-resistant and the open profiles let moisture through and ventilate the floor.

Several of our mats are antimicrobial, autoclavable, and made from a dense nitrile rubber compound. This makes them resistant to bacteria, oils, grease, and chemicals, while their durable design, slip-resistant surface, and open profiles ensure both safety and cleanliness.

STANDING MATS

Many workplaces are equipped with height-adjustable desks, yet many employees still spend most of their day sitting. A healthy workday is all about balance. Switching between sitting and standing boosts energy, improves focus, and reduces the risks of prolonged sitting. To make standing more comfortable, an ergonomic mat is the perfect support – it cushions your feet, eases pressure on joints, and helps you stay on your feet longer without fatigue.

FLOOR PROTECTORS

A floor protector protects floors and carpets from wear and tear and soiling. The most common use is at the workplace to protect the floor from the wheels of the office chair, but floors are often exposed to wear and tear or moisture in many other places. A properly sized floor protector is also suitable for the coffee or water dispenser, the printer or anywhere else where the floor needs protection. Both in PET and textile.

Peaceful acoustic environment

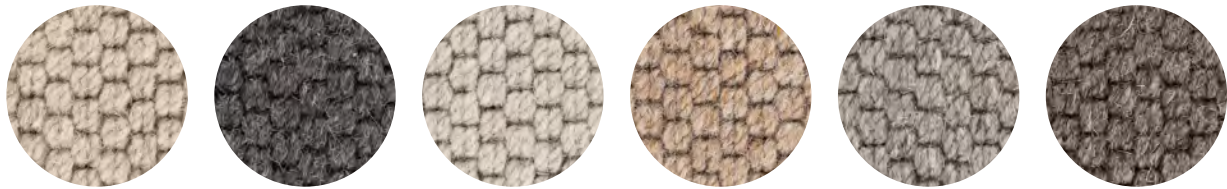

We offer a wide selection of textile carpets in a variety of colors and materials, including wool, sisal, velour, and loop pile. Our carpets come in a standard width of 400 cm and are supplied on rolls of approximately 25 linear meters. Loose-lay carpets can be edged with overlock stitching or binding tape for a refined finish.

LOBBY-/ INTERIOR CARPETS

Carpets help absorb sound, creating a quieter and more relaxing atmosphere - perfect for hotels, offices, or any setting where calm is essential. Carpets also trap dust and allergens, improving indoor air quality when vacuumed regularly. Unlike hard flooring, which allows particles to circulate freely, carpets support a cleaner, healthier indoor environment.

CORRIDOR MATS

Corridor mats are more than just a decorative detail – they are a practical and stylish solution that transforms narrow spaces into welcoming walkways. Whether it's an entryway, hotel corridor, or office hallway, corridor rugs add warmth and comfort while protecting your floors. A corridor rug acts as a protective layer, helping to preserve the condition of your floors – especially in high-traffic areas. The rugs absorb sound and reduce echoes, creating a quieter and more comfortable environment – ideal for hotels. With a wide range of colors, patterns, and materials, it's easy to find a corridor rug that complements your existing décor. It becomes a stylish element that ties the space together.

Unique solutions for unique spaces

We offer more than just standard mats. Our custom solutions are tailored to fit your needs, your space, and your brand. Whether you're aiming to make a strong first impression or solve practical challenges in tight or high-traffic areas – we provide rugs that truly make a difference.

Mats with custom prints and logos

Elevate your entrance or interior with a mat that features your logo, branded colors, or a unique design.

Using high-quality printing techniques, we create rugs that are not only functional but also reinforce your brand identity and visual expression.

Mats for elevators and staircases

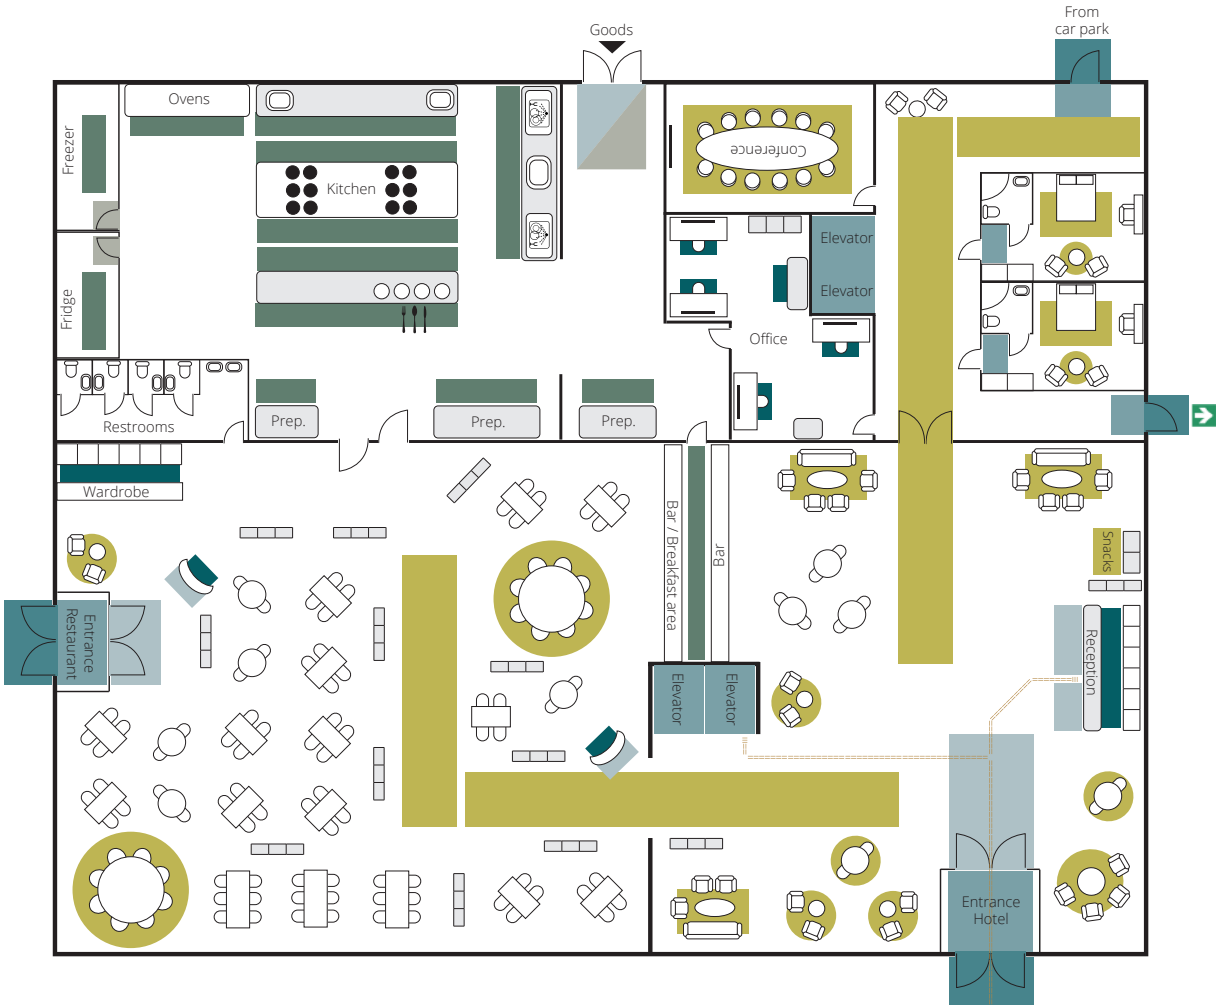

Tight spaces like elevators or staircases require special attention. We offer made-to-measure rugs specifically designed for these areas – improving both safety and aesthetics. Our rugs are built to withstand heavy wear while maintaining a clean, cohesive look throughout your building.

Every space is different – which is why we work closely with you to find the right material, size, and design for your specific needs. Our goal is to deliver mats that not only look great but perform exceptionally well in their intended environment.

Crafting memorable experiences is crucial in the world of hospitality, where guest comfort and satisfaction take precedence. Our mats and matting solutions are meticulously engineered to ensure a warm, inviting, and homely atmosphere.

Every detail is vital. Our mats, found in hotels and resorts, bed-and-breakfasts and vacation rentals, create an unforgettable and luxurious guest experience.

Specifically designed entrance mats extend a warm welcome while efficiently capturing dirt and moisture, guaranteeing cleanliness and safety.

GLASS CONTRAST MARKINGS

Contrast markings for glass surfaces made from solid-colored film for improved finish and durability. To ensure optimal contrast in varying lighting conditions, two-colored markings are recommended. This is because the background can vary depending on the viewing angle and whether, for example, the building lights are on or off.

With our round, two-colored standard marking "half-moons," you always get strong contrast regardless of what's behind the glass. We can also produce custom markings upon request - limited only by your imagination.
